

# Star Trek Next Generation U.S.S. Enterprise D - EAGLEMOSS -

Beitrag von „Science“ vom 17. September 2023, 15:51

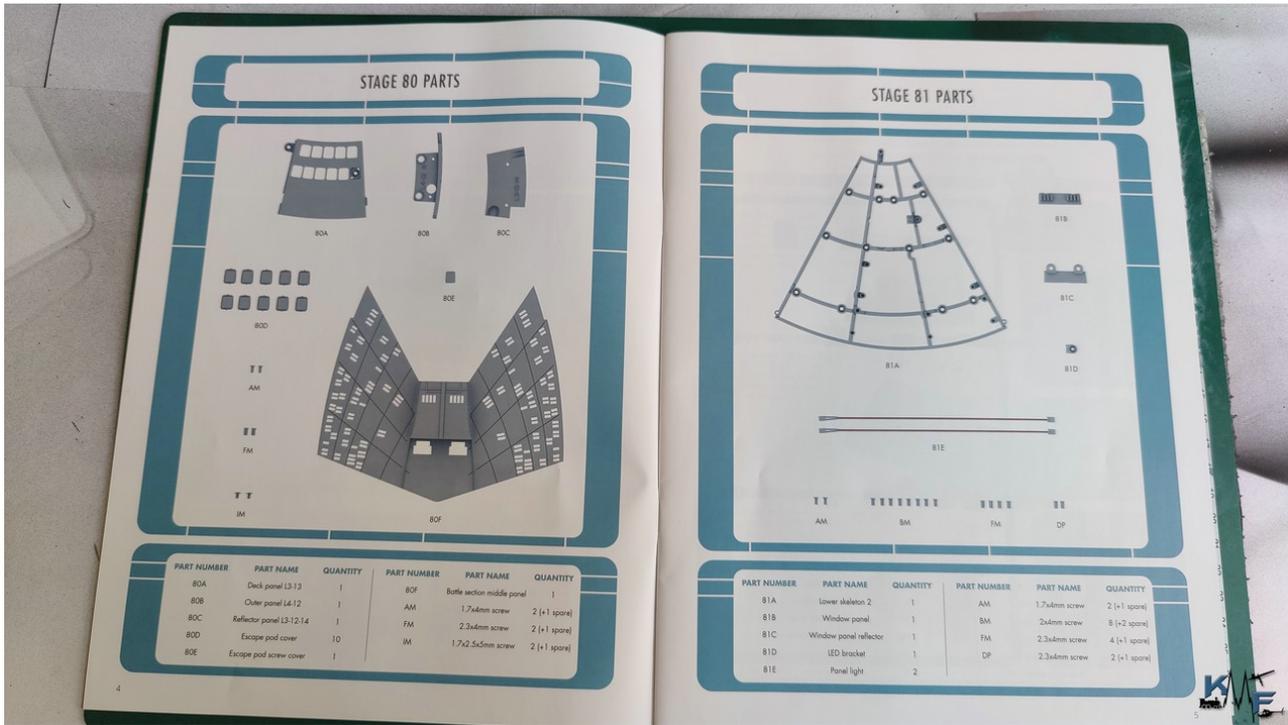

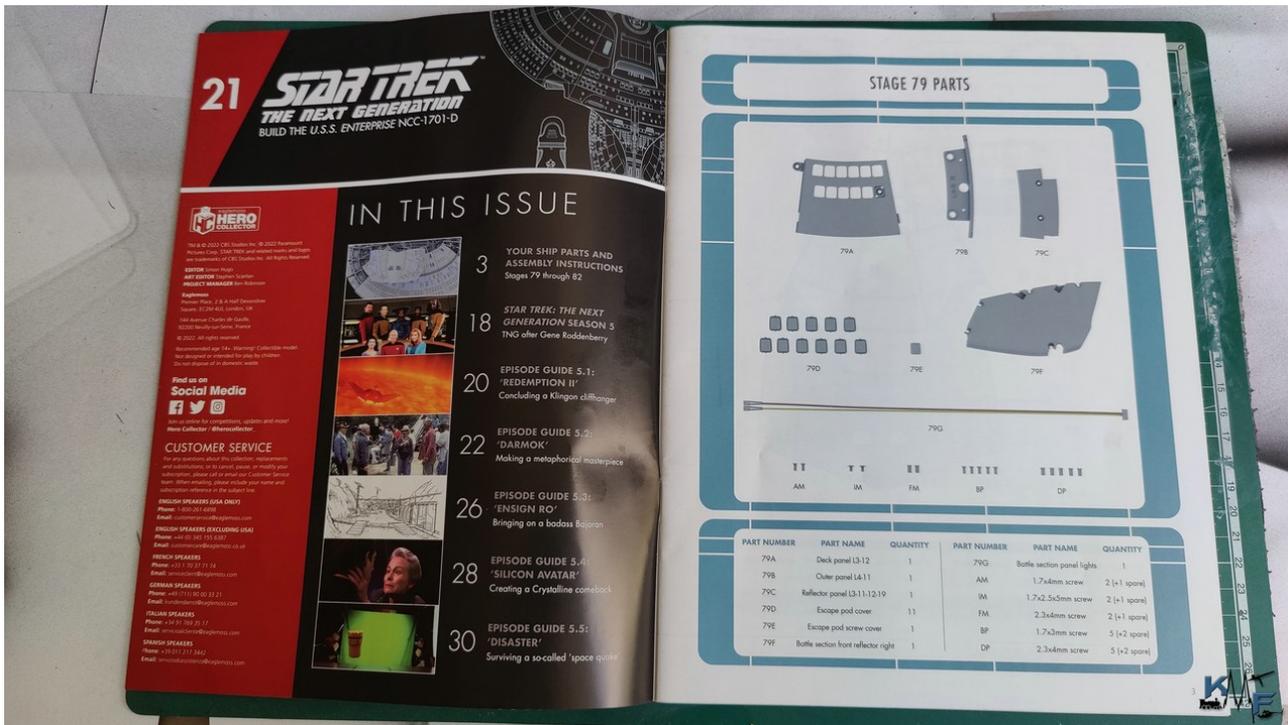

Hallo zusammen,

im Mai 2022 also vor 16 Monaten, habe ich euch den letzten Stepp zeigen können.

Nun, nachdem FANHOME das Abo übernommen hat, geht es endlich weiter.

**Blick in die Lieferung 21:**

### STAGE 82 PARTS

PART NUMBER	PART NAME	QUANTITY	PART NUMBER	PART NAME	QUANTITY
82A	Deck panel I1-03	1	82F	Deck panel windows	1
82B	Escape pod cover	3	82G	Window reflector panel	1
82C	Escape pod cover bracket I	1	82H	Battle section middle windows left	1
82D	Escape pod cover bracket II	1	AM	1.7x4mm screw	4 (+ 1 spare)
82E	Ventral phaser array I03	1	DP	2.3x4mm screw	2 (+ 1 spare)

### STAGE 79 ASSEMBLY

The lower saucer moves closer to completion, while a large piece of the battle section lights up for the first time.

#### ASSEMBLING DECK PANEL I3-12

**STEP A**  
Take deck panel I3-12 (79A) and fit 11 escape pod covers (79B) so that the red lines on each are furthest from the narrow end of the panel.

Then place reflector panel I3-11:12-19 (79C) over the escape pod covers and secure it with two AM screws.

Finally, position outer panel I4-11 (79B) along the edge of the deck panel and secure it with two IM screws.

#### PART LOCATOR

#### KEY

The illustrations are color-coded to help you identify the parts as you go along.

- RED** is used for screws, direction arrows, and connection points.
- YELLOW** is for the new part(s) in each step.
- GRAY** shows the assembly so far.
- BLUE** shows illuminated parts.

#### FITTING DECK PANEL I3-12

**STEP B**

Place the deck panel assembly at the edge of the saucer as shown so that outer panel I4-11 (79B) overlaps the edge of the corresponding deck panel on the upper saucer. Then secure the assembly to the skeleton using two FM screws.

Now carefully press the escape pod screw cover (79E) into position to hide the screw in the last escape pod recess.

**BUILD TIP**

This issue comes with two different types of escape pod cover. Only use the "screw cover" kind once you are happy with the fit of the deck panels and do not wish to adjust the screws any further.

#### INSTALLING A BANK OF BATTLE SECTION WINDOWS

**STEP C**

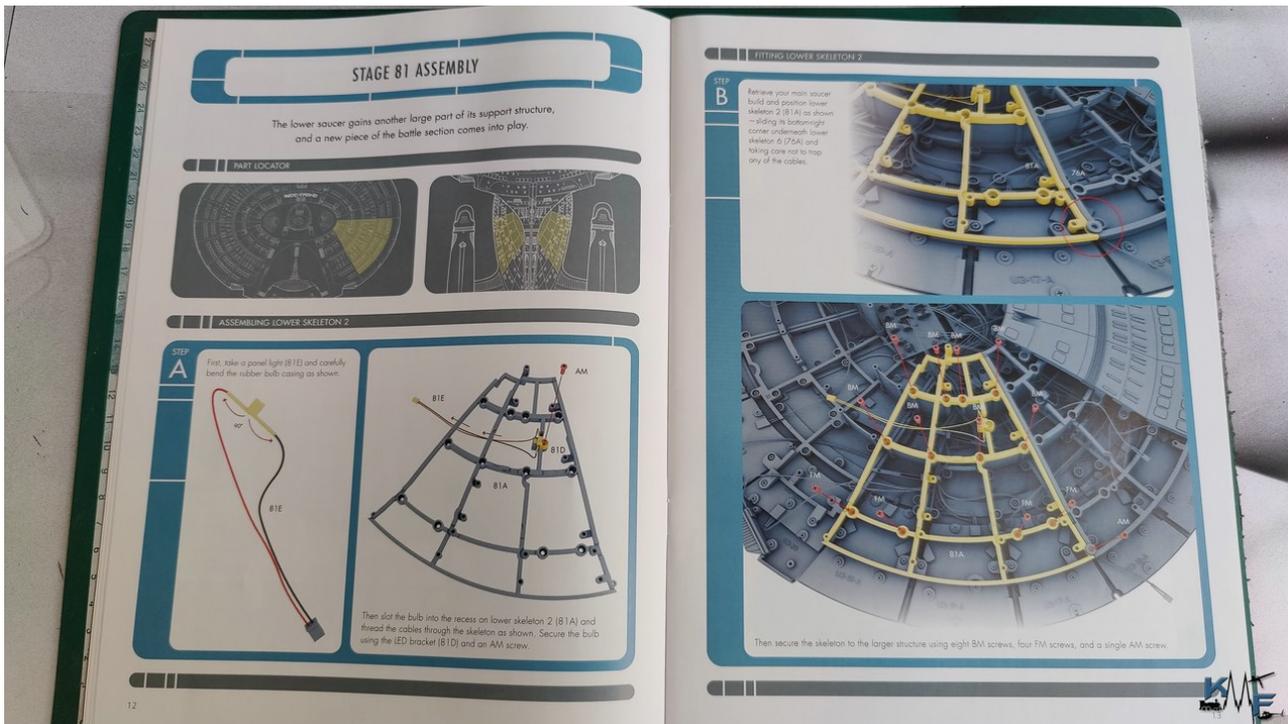

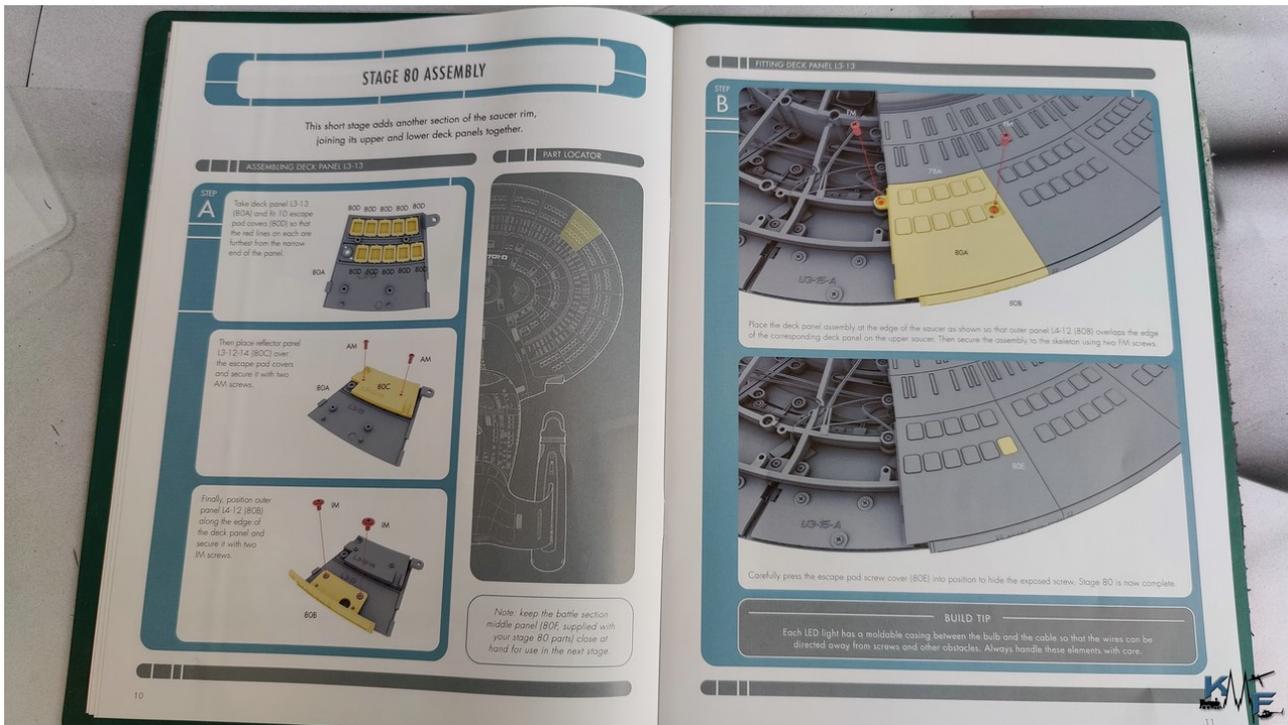

Remove your battle section front panel (75F, last used in stage 78). Take the battle section four reflector light (79C) and position it as shown, sliding both balls from the battle section panel light (79C) in the slots at its edge. Then secure the parts with five BP screws. To test both sets of lights on the battle section front panel, finally plug them into vacant "A1" sockets on saucer PCB 2 (S78) and flip the saucer switch to the "ON" position (see inset, below).

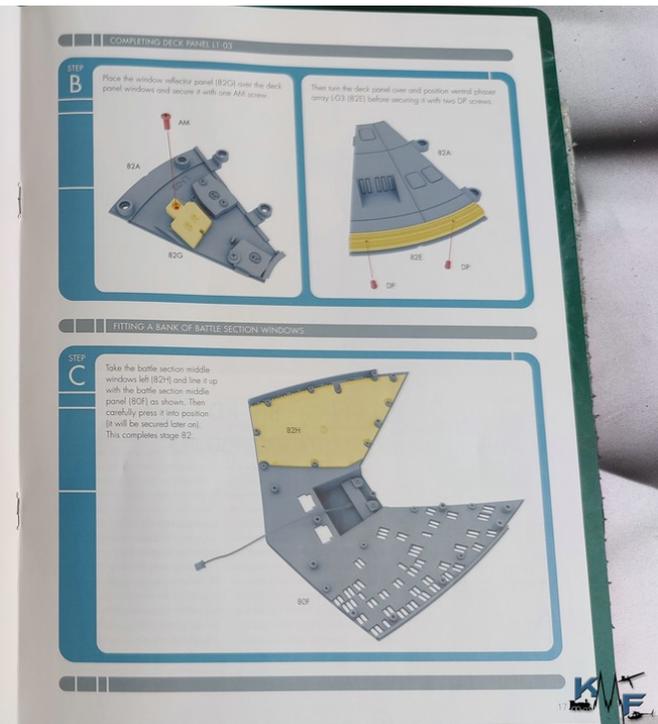

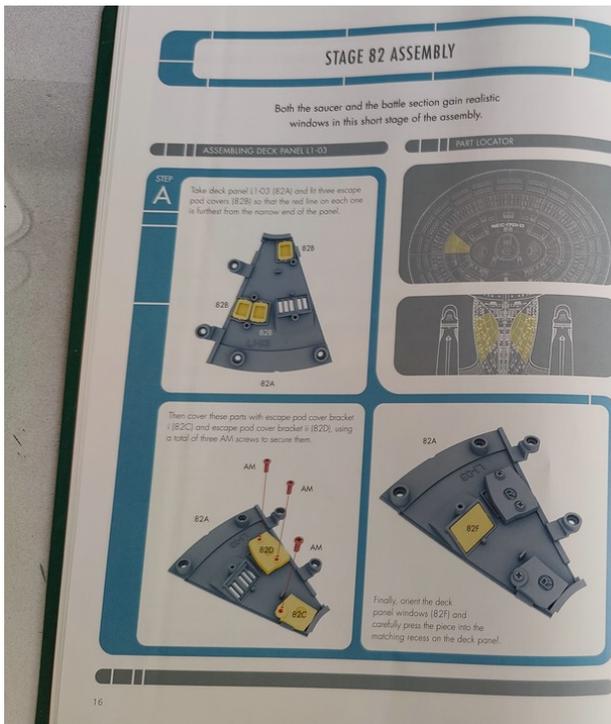

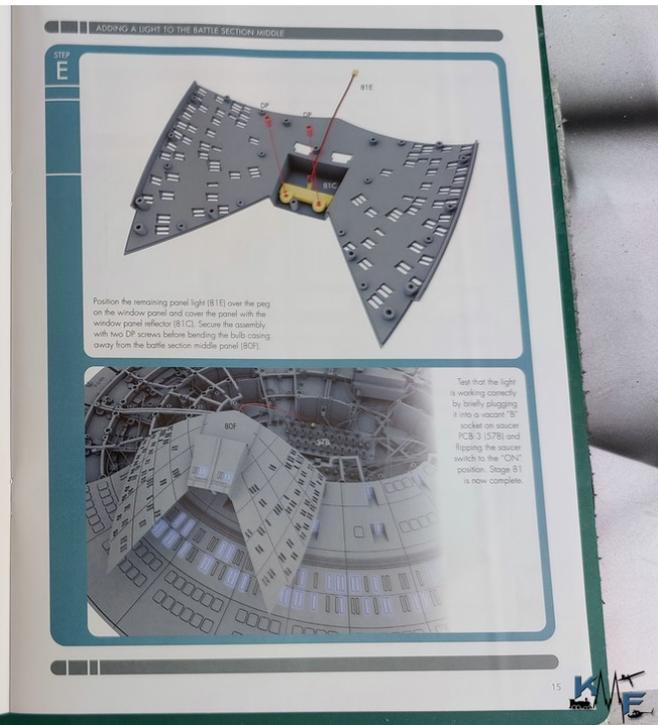

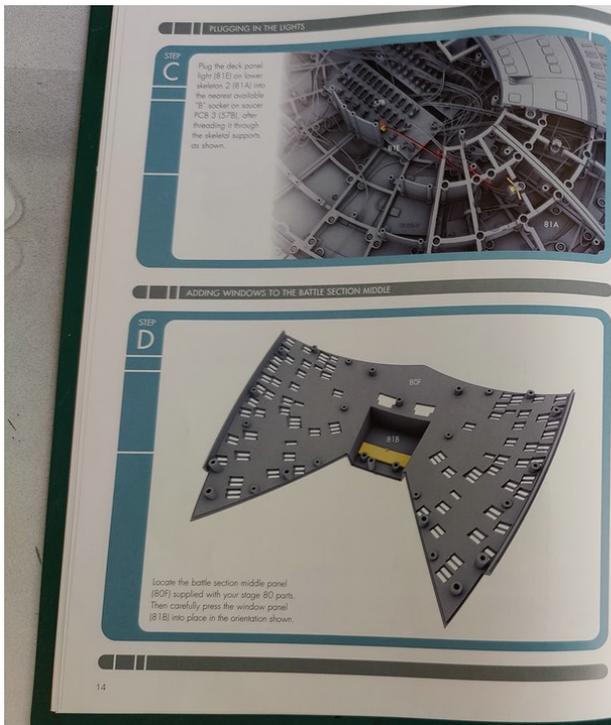

#### FITTING THE BATTLE SECTION FRONT PANEL

**STEP D**

Now retrieve your battle section upper bracket (82E, last used in stage 03) and combine it with the battle section front panel (75F), threading the cables through the structure as shown. Then secure the parts with five DP screws.

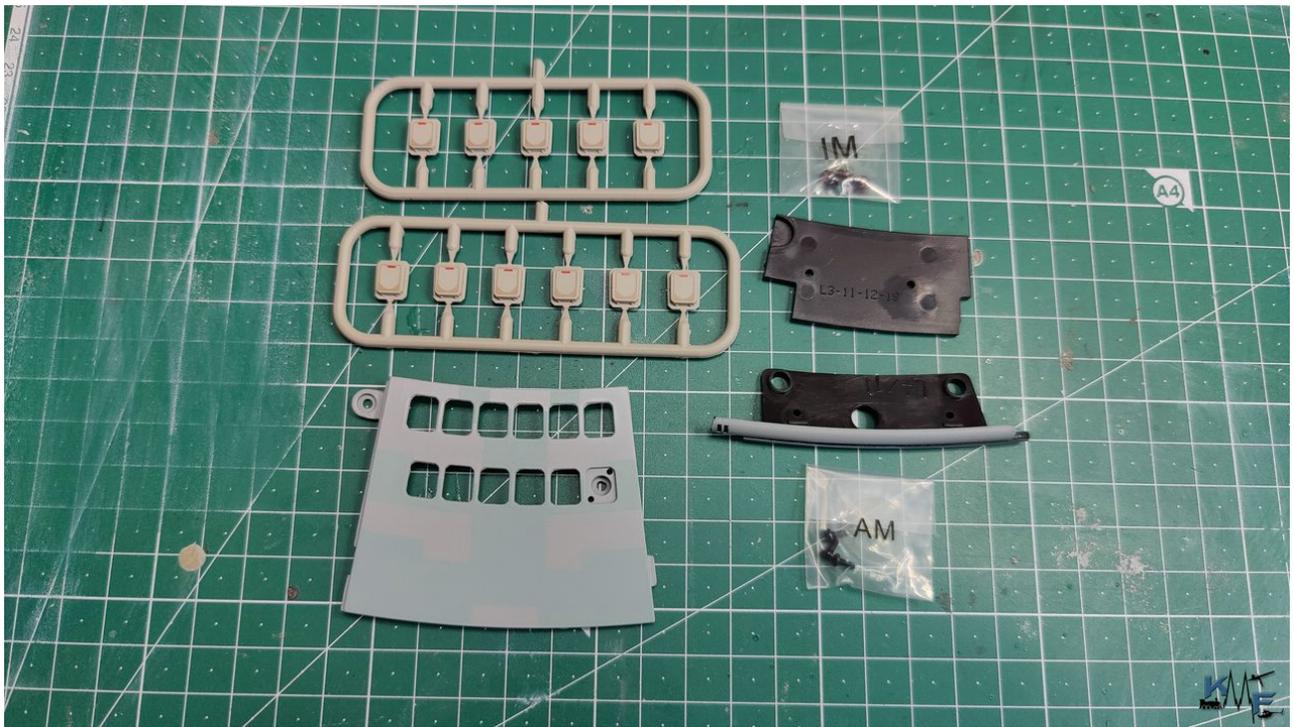

To complete stage 79, plug both sets of lights into the battle section PCB (S10), as shown in the inset below.

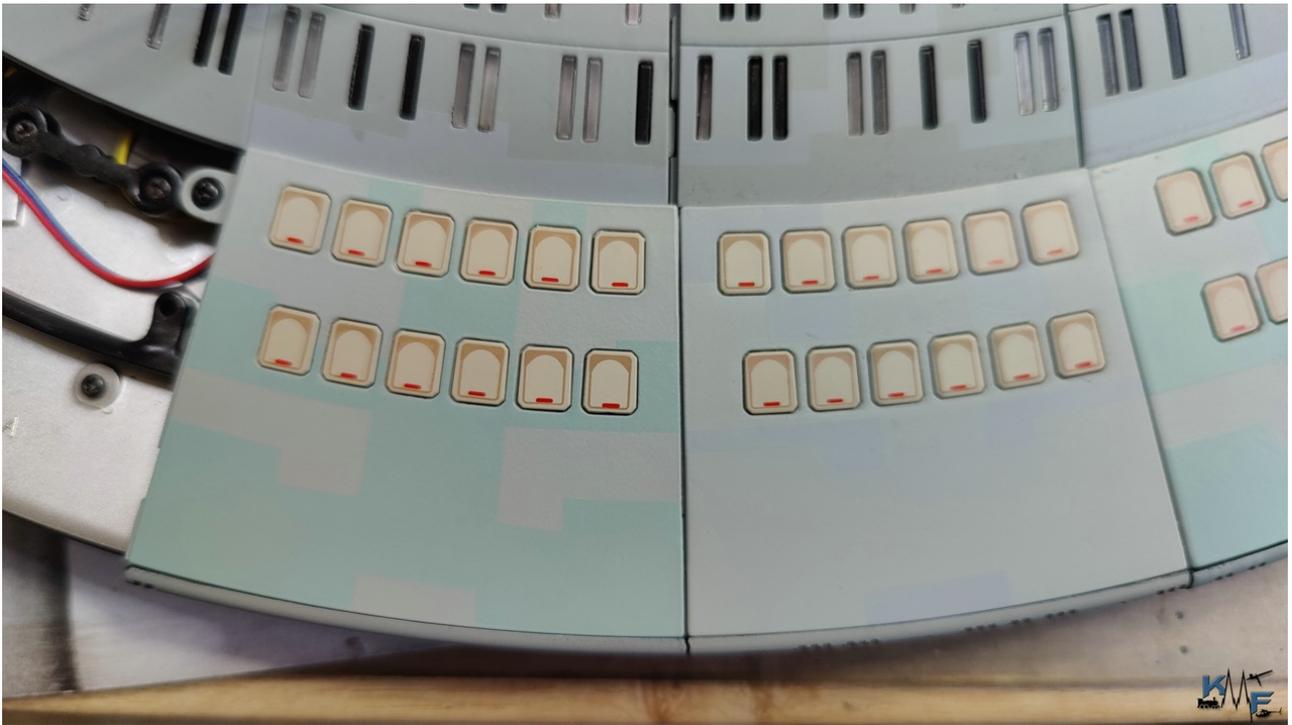

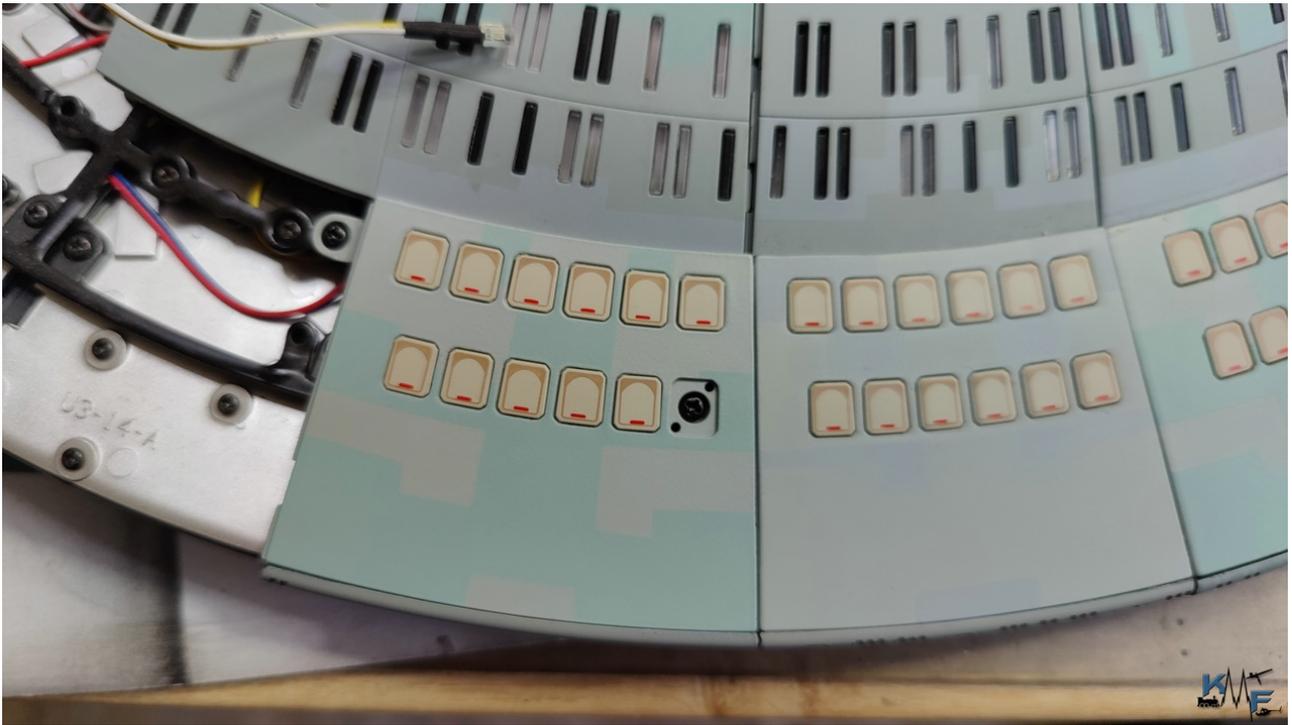

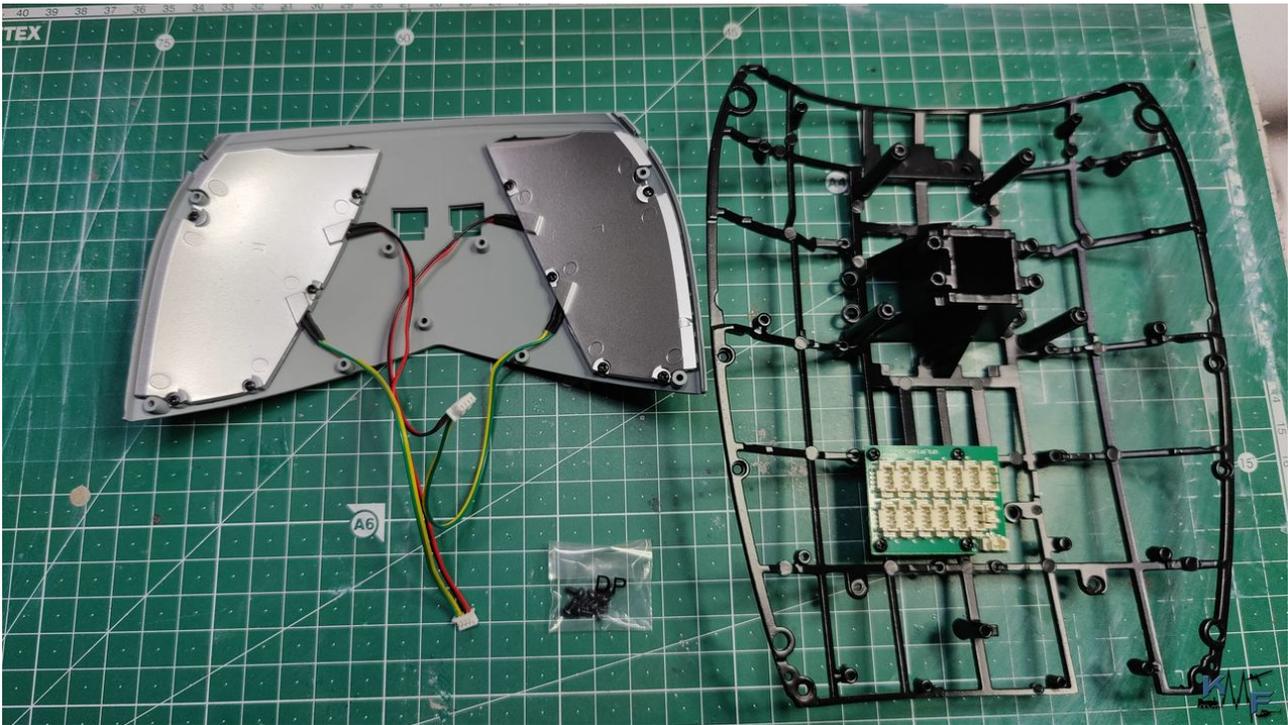

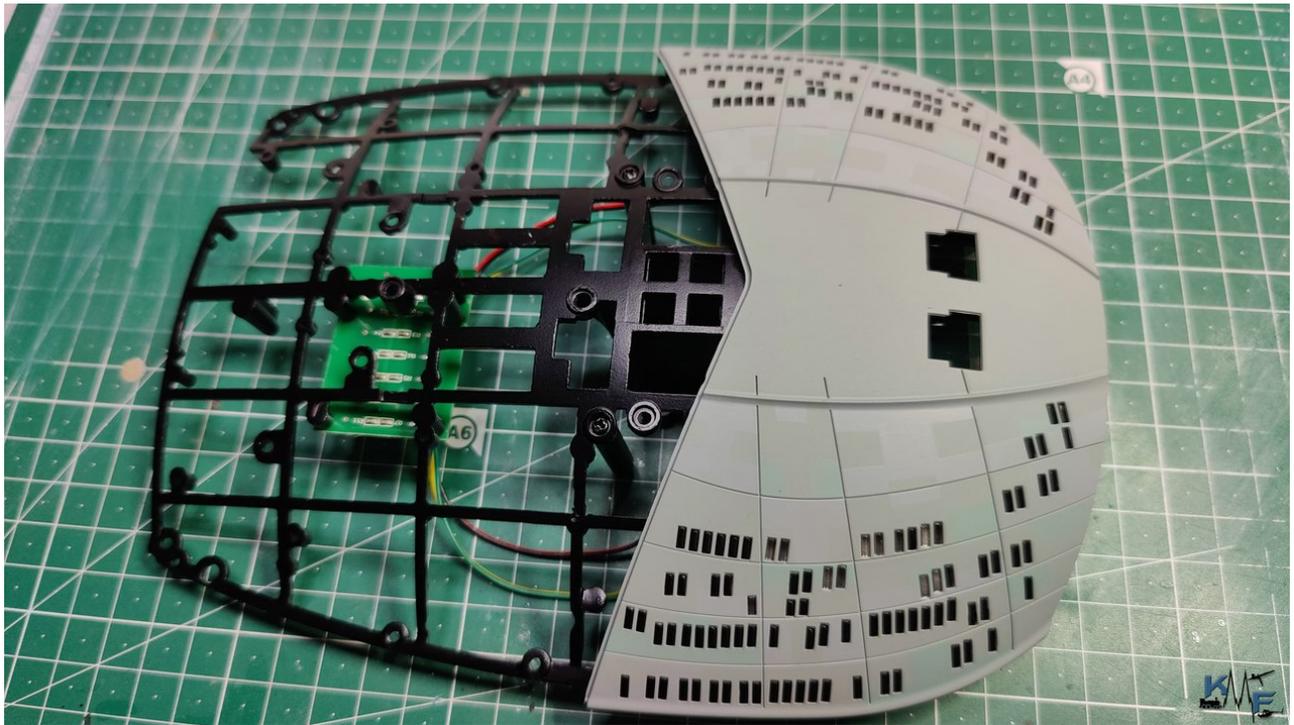

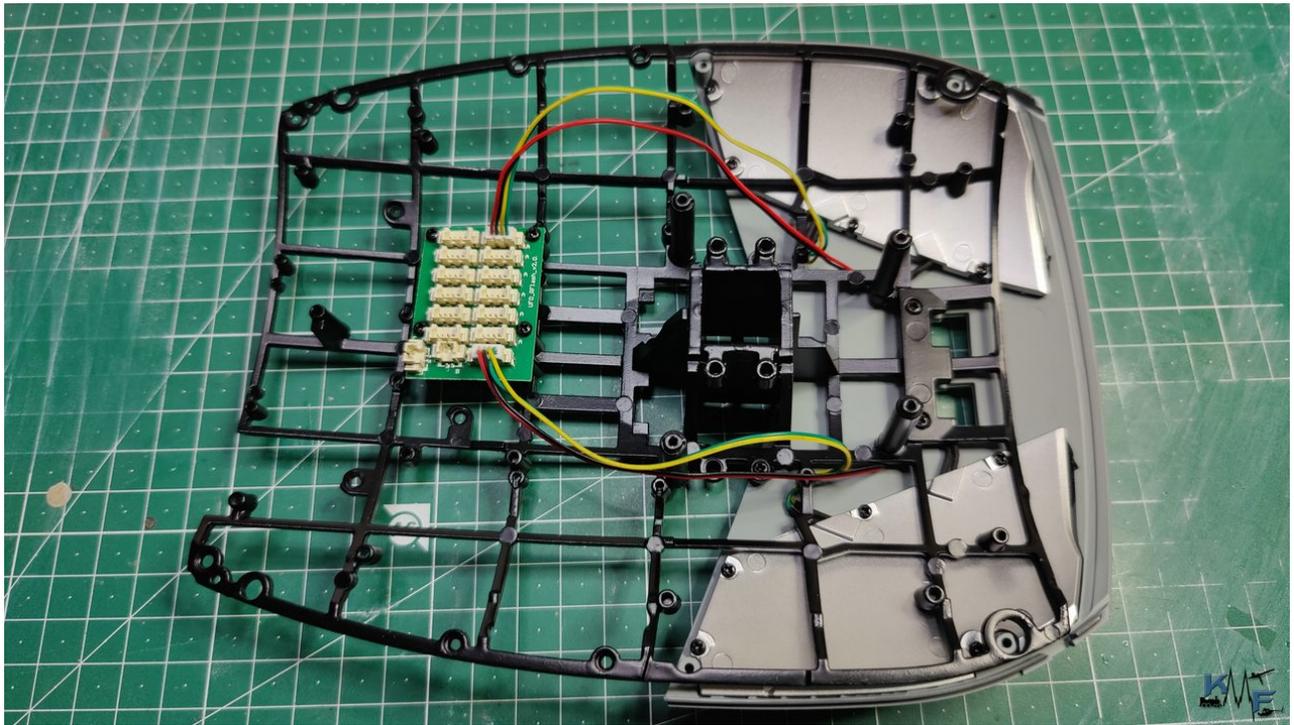

**Bauphase 079 bis 082:**
